

# DISPLAYS & EMBEDDED SOLUTIONS

# DISPLAY

With more than 35 years of experience we have developed a wide expertise in displays, embedded solutions and HMI interfaces. Thanks to the partnership with international companies that develop and produce state-of-the-art displays of various technologies, we offer solutions for a wide range of applications.

We can provide products working in extended temperature range, high humidity, under sunlight and other critical environments.

With a focus on the industrial market we offer reliable solutions, with extended temperature range up to  $-40^{\circ}\text{C} \sim +85^{\circ}\text{C}$  and lifetime of more than 70K hours of operation.

# EMBEDDED BOARD

We offer complete systems tailored to the customer needs. Our solutions are built on displays with or without a touch panel, that are controlled by either a SOM (system on module) or SBC (single board computer). The offered solutions are accomplishing not only the graphic interface but also provide several all-purpose communication interfaces making it a compact solution for machine control and more. Thanks to our expertise we offer professional support from the design stage to the delivery of the final product also granting to our clients the after sales and maintenance assistance

Our partner F&S offers cutting edge technology SOMs and SBCs, using state of the art NXP processors. Every product family grants 100% compatibility giving the opportunity to implement flexible solutions that can be upgraded/downgraded with little software modifications when needed. A team of expert software developers provides assistance on either Linux embedded, Windows compact and free RTOS throughout all the development of the project, granting an optimal final result.

READY TO USE DEVELOPMENT KITS FOR QUICK EVALUATION

The wide variety of products that we offer enables us to suggest tailored solutions in terms of computational power, cover lens, size and other specific needs. This flexibility gives customer the chance to select a specific ad-hoc solution that balances performances and price. Our offer includes standard and custom products finished by aesthetic cover lens with custom shape, colors, thickness, bonding, and surface treatment. To speed up the time to market we provide the customer with ready to use development kits, including all the tools they need for each specific application.

EDT Smart Embedded display is a powerful solution integrating TFT, Capacitive Touch Panel, control board and cover lens. This solution makes possible to implement animations, gestures and videos in a compact size, also granting ultrafast boot. Its power is not only limited to the display interface but gives also the possibility to make use of several STM32 features, from simple GPIO to SPI/UART/I2C interfaces. Moreover, the ad-hoc software designed to program the graphic interface makes the development super easy and fast, reducing the time to market to minimum.

## TouchGFX

Graphic framework based on TouchGFX and FreeRTOS  
High performance with low power

BOOTZERO

Module Size	4.3"	7.0"	10.1"	
Brightness	380nits	350nits	425nits

Ext. SDRAM	8MB	8MB	8MB	
Interfaces	RS232 RS485	I <sup>2</sup> C SPI	3.3V UART USB OTG	CAN 3.3V GPIO

## Board

AAEON offers a wide range of different embedded boards like Compact Boards, 3.5" Sub-Compact Boards, EPIC boards, PICO-ITX boards, COM Express Modules, PC/104 Modules, PC/104 Peripheral Modules, IoT Node/Gateway Boards, and full-sized & half-sized SBCs. Embedded single boards provide an easily configurable and efficient solution to consolidating industrial platforms and infrastructure in fields such as smart cities, smart building management, smart transportation, energy-efficient grids, POS and digital signage, and the medical industry, products are also ideal for IoT uses and are designed for minimum maintenance and maximum ruggedness. AAEON's boards are designed for superior environmental resilience. Can be used within a temperature range of  $-40^{\circ}\text{C}\sim 85^{\circ}\text{C}$  and is specifically built to combat harsh environments.

## System

AAEON is committed to delivering high-quality intelligent system products, such as Rugged Panel PCs, Expandable Industrial Computers, Full HD Infotainment Displays, Rugged Tablets, Embedded PCs and related accessories, for use in all aspects of sectors including Digital Signage, Transportation, Industrial Automation, Healthcare, Hospitality, Harbor/Marine, Military/ Government, Public Safety and Energy. AAEON has the capability to customize services for a range of embedded computers and system products according to customer requirements and specifications.

# MONITOR

Thanks to to collaboration with multiple partners we are able to offer a wide variety of industrial grade monitors that are capable of working 24/24 7/7 in hard conditions. The offered industrial monitors can be sunlight readable, vandal proof, anti scratch, anti glare, splash proof up to IP65. All these monitors are equipped with the most common input ports such as VGA,DVI,HDMI,Display Port, Mini Display Port, thus can become a plug and play solution for every system.

# PANEL PC

We are able to provide reliable panel PCs for all applications, from standard fanless PCs to fully custom solutions. Whether it is needed to customize the performance of the PC, the enclosure material or color, power supply voltage, backlight brightness or touch screen technology. Multiple CPU are available from Pentium to i7 processors enabling us to provide the perfectly balanced solution in terms of costs and performances. We can offer the perfect choice for a wide variety of applications including POS systems, industrial control panels, home automation and digital signage.

# HUMAN MACHINE INTERFACES

Compact, reliable, ready to use are the key characteristics of our proposed HMI modules. They offer a powerful solution to multiple applications such as machine and system control or home automation projects. Thanks to RS232, RS485, RS422, Ethernet connection, PLC and some models also able to drive motors, meters, SCM [...] They can be used in many fields, to achieve the overall monitoring and control, becoming a complete compact monitoring center.

*human machine interface specialist*
